

Greener - Tougher - Better

About All Seasons Synthetic Turf

Introducing the professionals from All Seasons Synthetic Turf who'll be working with you every step of the way.

We are fully equipped to look after all your needs, with our own 9 tonne tipper truck, Bob Cat for larger dig outs and our Mini Diggers for those smaller jobs. For those jobs with difficult access that need to be done by hand, we have our strong friendly installers.

Supply and Installation Service

Synthetic turf has grown in popularity in recent years because it allows homeowners to possess a lush-looking lawn that stays gorgeously green all year round with minimal maintenance.

All seasons synthetic turf works very closely with its highly regarded Australian manufacturer and invests considerable time and money on research and development. This enables us to provide our customers with the highest grade of artificial grass to suit Perth's harsh climate.

All seasons synthetic turf supplies premium quality artificial turf to suit every budget, servicing all Perth metropolitan areas from Yanchep and Rockingham to Mandurah and Busselton and all Regional/Rural areas. We are a family owned and run business that takes great pride in our winning combination of high-grade products and first rate customer service. From your first initial contact with us to the final installation, we aim to ensure the process runs smoothly.

Our supply and installation process includes an initial consultation and measure of the proposed area. Preparation of the proposed site using our Company owned 9 tonne tipper, Bobcat and mini Kanga. Your lawn of choice is installed by one of our highly trained installation teams and concludes with a follow up service from one of our friendly administration team.

Our range of synthetic turfs are Australian made and some even qualify for the coveted Australian made campaign logo. Our products have the maximum UV protection and manufactured specifically for Perth's harsh climate. They are also free from heavy metals or harmful toxins, making it safe for children, pets and the whole family.

DIY Service

If you consider yourself a DIY enthusiast or would like to install your own synthetic turf, then we have a complete DIY service.

We can help with the design of your new lawn, including how much artificial turf you will need, as well as joining tape, pins and specially formulated kiln dried sand together with full installation instructions and tips.

Commercial and Corporate

Artificial turf can provide a cost effective and attractive solution as maintenance costs are a major issue within commercial landscaping. Please contact our Head Office to speak to our commercial division.

Cool Play Synthetic Turf

All Seasons Synthetic Turf have a new and exciting artificial grass product available called Cool Play.

For many years there have been limited choices available for our children's play area's, day care centres etc. In the past many companies have offered a variety of sporting surfaces but these were never adequate due to limited colour options, high temperatures, abrasive to the little ones and not aesthetically pleasing. Made in Australia. Cool Play has overcome all of these objections.

The surface temperature - Cool Play uses a PE yarn that has IR-reflective Coolplus technology, this along with Entanglement technology, makes for perfect aesthetics, reduced heat, softness, high performance and durability.

Colours - Available in Green, Purple, Blue, Yellow, Bright Red, Terra Cotta and White.

Features and Benefits

- Australian made using German-engineered yarn containing Coolplus and Entanglement Technology.
- The Entanglement Technology in the Coolplus fibre interlaces the molecular chains in the turf fibre into a three dimensional shape. The result is an exceptionally soft surface and a considerably longer lifespan.
- Highest level of performance, durability and comfort.
- Cool Play is super soft, with texturized monofilament yarn that hides the sand infill and this protects against skin abrasions.
- This artificial grass will not hide foreign objects, become displaced or bio-degrade.
- Wide colour palette enables you to be creative in your design of fake lawn.

“Coolplus” Yarn Technology Up To 30% Cooler

The biggest question for consumers is does synthetic lawn get very hot in the direct sun during our long dry summers? The answer is yes on a very hot day anything outside and in full sun does get hot including fake grass, timber decking and paving.

The very exciting news is we have artificial grass available now that has a new technology scientifically proven to not get as hot as traditional fake grasses.

Coolplus Technology: The secret behind this technology is Infrared (IR) reflective pigment technology. IR radiation is a component of sunlight that causes molecular vibration, which translates into heat. The CoolPlus range of synthetic grass does not absorb IR radiation, meaning that the synthetic grass heats up slower than traditional synthetic grass, which leads to lower surface temperatures in direct sunlight.

Features and Benefits

- Up to 10-30% cooler yarn, “scientifically proven”
- Designed by us for Western Australia's harsh climate and conditions
- Soft underfoot and extremely natural looking
- Two tone IR-reflective polyethylene monofilament, texturised monofilament multicolour subpile
- Environmentally friendly yarns which are heavy metal free and 100% Lead Free
- The yarn is protected against UV degradation to the Maximum level

Summer Cool has a 35mm pile height with an dense olive green/ field green yarn with a multi-tone subpile and is our number 1 selling artificial grass. This is part of our CoolPlus range and Perth's most realistic looking lawn. **Made in Australia.**

If you would like some advice on what plants to use, just call one of our friendly staff members to discuss your requirements or look on our website to view our extensive range, or come in our showroom to view our display.

Frequently Asked Questions

Does Artificial Turf Get Hot?

In comparison to normal grass, yes it will be hotter but it's cooler than dark paving, timber or decking. Our West Australian sun can be very harsh; the great thing about the artificial turf is that it doesn't retain the heat so it cools down very quickly. You can simply wet the area down with a hose and it will be instantly cooler, the kiln-dried sand will retain the moisture.

Is It Pet Friendly?

Yes, all of our products are pet friendly. You can clean it the same as real grass but the urine will not stain or kill the lawn. Depending on the pet, you may or may not at some point have an odour, this can be removed safely and easily with one of our urine removing products. If you have a destructive pet, we take extra measures to make sure we pin the edges down and put extra sand on top to give it extra weight.

Do I Get A Warranty?

Yes, we give a 10-year manufacturer's warranty when we do the installation and an 8-year warranty for supply only. Our products are made in Australia.

How Long Will My Turf Last?

We give a 10-year warranty; the Australian manufacturer suggests you could expect a lifespan of 20-25+ years.

Is It Safe For My Children To Play On?

Yes, our entire range is Australian Made and safe for children as they are all FDA approved and don't contain any lead or harmful products.

Can We Install It Ourselves?

Yes, we have a full DIY kit which includes most materials you need to complete the process, including installation instructions.

Why Should I Buy Australian Made?

Buying Australian-made grass gives you 100% peace of mind that the products are made for our unique climate and conditions, being Australian-made also ensures no harmful chemicals and 100% lead-free.

Why Should I Choose All Seasons Synthetic Turf?

When you choose All Seasons Synthetic Turf, you are dealing with a family-owned and run business that specialises in Synthetic Turf. We've designed our landscape products that are manufactured here in Australia. Our installation is completed by our staff right from the site visit works to the final laying of your lawn of choice. We have invested in a fully stocked showroom and warehouse, where you can see how the lawns look before you buy.
